

CHANGE NOTICE

Affected Document: IS-GPS-705 Rev J	IRN/SCN Number XXX-XXXX-XXX	Date: DD-MMM-YYYY
Authority: RFC-00502	Proposed Change Notice PCN-IS-705J_RFC502	Date: 31-MAY-2023
Document Title: NAVSTAR GPS Space Segment/Navigation User Interfaces		
RFC Title: 2023 Proposed Changes to the Public Documents		
Reason For Change (Driver): <ol style="list-style-type: none">1. Finalize the CNAV Schedules Technical Baseline changes2. Resolve the Data ID Issue in IS-GPS-200 (a commercial vendor did not want Data IDs other than 2)3. Add the maximum power for GPS III/IIIF SVs to IS-GPS-2004. Accommodate all administrative fixes possible from Boeing's list of fixes		
Description of Change: <ol style="list-style-type: none">1. Update the CNAV message schedule information2. Publish the resolution for the Data ID Issue to IS-GPS-2003. Add the maximum power for GPS III/IIIF SVs to IS-GPS-2004. Fix the three figures that have the most readability problems		
Authored By: RE: Tony Anthony		Checked By: RE: Emily Hendrickson

Section Number:
20.3.3.0-16

WAS:

* MESSAGE TOW COUNT = 17 MSB OF ACTUAL TOW COUNT AT START OF NEXT 6-SECOND MESSAGE

Redlines: <not available graphically>

- The GNSS ID field was renamed GGTO ID near the middle of the figure.

* MESSAGE TOW COUNT = 17 MSB OF ACTUAL TOW COUNT AT START OF NEXT 6-SECOND MESSAGE

Rationale:

5/19/2023: CRM #142 Renamed GNSS ID parameter associated with MT 35 to GGTO ID to eliminate overloading the GNSS ID definition. (T. Anthony)

IS705-1723:

Section Number:

20.3.3.8.1.0-2

WAS:

Bits 157 through 159 of message type 35 shall identify the other GPS-like navigation system to which the offset data applies. The three bits are defined as follows;

000 = no data available,

001 = Galileo,

010 = GLONASS,

011 through 111 = Reserved in order to preserve use of these values in a future revision of this IS. Until such a revision, the user segment developing to this version of this IS should interpret these values as indicating that the GPS/GNSS Time Offset Parameter data, to which the GNSS Type ID applies, is presently unusable.

Redlines:

Bits 157 through 159 of message type 35 shall identify the other GPS-like navigation system to which the offset data applies. The three bits are defined as follows:

000 = no data available,

001 = Galileo,

010 = GLONASS,

WAS:

Broadcast system of messages is completely arbitrary, but sequenced to provide optimum user performance. Message types 10 and 11 shall be broadcast at least once every 24 seconds.

Redlines:

~~Broadcast~~The system broadcast schedule of messagesCNAV message types is completely arbitrary, but sequenced to provide optimum user performance.- Message types 10, 11, and ~~11~~a clock message shall be broadcast at least once every 30 seconds (with a nominal rate of 24 seconds) to provide system users the clock, ephemeris and integrity (CEI) data needed to access GPS. Among the broadcast clock messages, an MT 30 message will be broadcast once every 150 seconds. Other message types may not be broadcast, but when they are scheduled for broadcast, they will be broadcast in between these CEI messages. If a message type is scheduled for broadcast on L5I from a satellite, that satellite will broadcast that message type on L5I at least every 10 minutes, unless a message generation failure results in its replacement with a Message Type 0. Message types with constellation data (like almanac and differential corrections) will cycle through any allotted broadcast slots in these 10-minute intervals, and therefore, will take longer than 10 minutes to complete the broadcast of the entire data set. CNAV message broadcast schedules may differ between satellites, and between L2C and L5I on the same satellite.

IS:

The broadcast schedule of CNAV message types is completely arbitrary but sequenced to provide optimum user performance. Message types 10, 11, and a clock message shall be broadcast at least once every 30 seconds (with a nominal rate of 24 seconds) to provide system users the clock, ephemeris and integrity (CEI) data needed to access GPS. Among the broadcast clock messages, an MT 30 message will be broadcast once every 150 seconds. Other message types may not be broadcast, but when they are scheduled for broadcast, they will be broadcast in between these CEI messages. If a message type is scheduled for broadcast on L5I from a satellite, that satellite will broadcast that message type on L5I at least every 10 minutes, unless a message generation failure results in its replacement with a Message Type 0. Message types with constellation data (like almanac and differential corrections) will cycle through any allotted broadcast slots in these 10-minute intervals, and therefore, will take longer than 10 minutes to complete the broadcast of the entire data set. CNAV message broadcast schedules may differ between satellites, and between L2C and L5I on the same satellite.

Rationale:

5/17/2023 Per AWG 1A, changed "in-between" to "in between" and "10 minute intervals" to "10-minute intervals" (T. Anthony)5/16/2023 CRM #78 replaced "therefore may take longer" with "therefore will take longer" and replaced "within 10 minutes" with "at least every 10 minutes" (T. Anthony)

5/3/2023: CRM #102 Use present tense "broadcast" (T. Anthony)

3/14/2023: Added note about the exception for how long the interval will be between successive messages being broadcast and extended the possible interval for MT 10, 11 and 30. (T. Anthony)

2/28/2023: Overall plan is to reduce the number of messages that have a specific Maximum Broadcast Interval per TIM #1. Specifically, Message Type 30 Maximum Broadcast Interval is added to this paragraph along with Message Types 10 and 11. Then Table 20-XII isn't needed. (T. Anthony)

IS705-1731:

Section Number:

20.3.4.1.0-2

WAS:

All other messages shall be broadcast in-between, not exceeding the maximum broadcast interval in Table 20-XII. Message type 15 will be broadcast as needed, but will not reduce the maximum broadcast interval of the other messages. Type 15 messages that are longer than one page will not necessarily be broadcast consecutively.

Redlines:

~~All other messages shall be broadcast in-between, not exceeding the maximum broadcast interval in Table 20-XII. Message type 15 will be broadcast as needed, but will not reduce the maximum broadcast interval of the other messages- Type and 1536~~ messages that are longer than one [text](#) page will not necessarily be broadcast consecutively.

IS:

Message Type 15 and 36 messages that are longer than one text page will not necessarily be broadcast consecutively.

Rationale:

5/19/2023: CRM #79 per the AWG added "and 36" , inserted "text" before "page" and removed the parenthetical expression that associated page with TEXT_PAGE. (T. Anthony)

5/3/2023: CRM #79 Retained Message Type 15 relevant sentences while deleting the reference to Table 20-XII. Also define how one identifies pages (T. Anthony)

2/28/2023: This change adds the Maximum Broadcast Interval for Message Type 30 series clock messages to 20.3.4.1 and drops Table 20-XII entirely per TIM #1 (T. Anthony)

IS705-1551:
