## INTERFACE REVISION NOTICE (IRN)

Note: This Summary Signature Page is to be used after all signatories have signed separate Signature Pages.

| Affected IS: IS-GPS-705 Rev D | IRN Number IRN-IS-705D-006 | Date: 06-SEP-2017 |
| :---: | :---: | :---: |
| Authority: RFC-00354 | PIRN Number PIRN-IS-705D-006 | $\begin{gathered} \hline \text { Date: } \\ \text { 26-APR-2017 } \end{gathered}$ |
| CLASSIFIED BY: N/A DECLASSIFY ON: N/A |  |  |
| Document Title: NAVSTAR GPS Space Segment/User Segment L5 Interfaces |  |  |
| Reason For Change (Driver): <br> The linkage between different timing systems is not properly captured in the current technical baseline. Using the existing IS-GPS-200 \& IS-GPS-705 documentation, CNAV users will calculate the wrong Universal Time 1 (UT1) immediately following a leap second change. As a result, user applications that require high precision pointing will cause the pointing to be in error. Possible users may include any systems that require high precision pointing. |  |  |
| Description of Change: <br> The proposed changes to the impacted technical baseline documents would correctly calculate UT1 during a leap second transition. |  |  |

## Redlines:

When implementing the first equation in Table 20-VIII, WN-ot and tUTC EOP is derived from data contained in message type 33 (see Section 20.3.3.6). For a given upload, the Control Segment shall ensure the $\Delta U T 1$ and $\Delta U T 1$ values in message type 32 are consistent with the UTC parameters ( $W N-o t, A 0-n, A 1-n, A 2-n$, and $\Delta t L S$ ) in the message type 33 , and the tEOP in message type 32 is identical to the tot in message type 33.

IS :
When implementing the first equation in Table $20-\mathrm{VIII}, \mathrm{WN}_{- \text {ot }}$ and tutc_eop is derived from data contained in message type 33 (see Section 20.3.3.6). For a given upload, the Control Segment shall ensure the $\Delta U T 1$ and $\Delta U \dot{T} 1$ values in message type 32 are consistent with the UTC parameters ( WN -ot, $\mathrm{A}_{0-n}, \mathrm{~A}_{1-n}, \mathrm{~A}_{2-n}$, and $\Delta \mathrm{t}_{\mathrm{LS}}$ ) in the message type 33 , and the $\mathrm{t}_{\text {Eop }}$ in message type 32 is identical to the $t_{o t}$ in message type 33.

Redlines:
To avoid discontinuities in UT1 across leap seconds, the value of $\Delta t L S$ must be used in the calculation of tUTC EOP regardless of whether a leap second has occurred. This accounts for the continuous nature of UT1 until a new upload after the leap second provides an update value for $\Delta$ UT1 that is consistent with the new $\Delta t L S$.

IS :
To avoid discontinuities in UT1 across leap seconds, the value of $\Delta \mathrm{t}_{\llcorner\mathrm{L}}$ must be used in the calculation of $\mathrm{t}_{\text {utc_eop }}$ regardless of whether a leap second has occurred. This accounts for the continuous nature of UT1 until a new upload after the leap second provides an update value for $\Delta U T 1$ that is consistent with the new $\Delta \mathrm{t}_{\mathrm{L}}$.
